Active Directory Homelab – Executive Summary

Kingsley Otoo

This one-page executive summary highlights my hands-on experience with Active Directory (AD) setup and management in a homelab environment.

Highlights:

- Built and configured Windows Server 2022 as a Domain Controller
- Created and managed Organizational Units (OUs)
- Implemented Group Policy Objects (GPOs) for security and compliance
- Automated user/group management with PowerShell
- Configured backups and exported GPOs for documentation

This project demonstrates my ability to design, deploy, and document enterprise-level AD infrastructure. It also reflects my readiness for IT support and systems administration roles.
